Background

Mission

Our goal is to professionally **implement software development projects**, i.e. to provide Customer with “just-what-he-needs” solutions that meet his development standards and cost him as little as possible. bees4honey’s activity is firmly grounded on Conscientiousness, Diligence, Expertise, and Faithfulness to Customer. We want our Customer to be satisfied with his contract development experience and to feel serenity and confidence of his **mobile software development partner**.

Skills & Experience

bees4honey’s development **experience is more than 10 years now**. We have dozens of successful desktop and web projects. For almost two years we are concentrating our efforts in mobile software development - iPhone, iPad and Android.

Our main skills and experience are now concentrated in two fields:

1. **iPhone and iPad development;**
2. **Android development.**

During our work we acquired practical experience in working with *OpenGL, 2D animation, sound effects, SQLite database, geo location technologies, web services integration, social media integration, image processing*.

We also have a good expertise in *user interface design and usability*.

Project Management Approach

For 10 years we provide our clients with software outsourcing service. We’ve done lots of projects during this time. Our project management approach is **experience-based and time-tested**. We love agile project management methodology. We keep projects **within time and budgets frames**.

Services

Being a professional development team we’d like to participate in your project and bring in our knowledge and expertise to your app. We are happy to offer you a contract development service in the following areas:

- **iPhone/iPod software development;**
- **iPad software development;**
- **Android software development.**

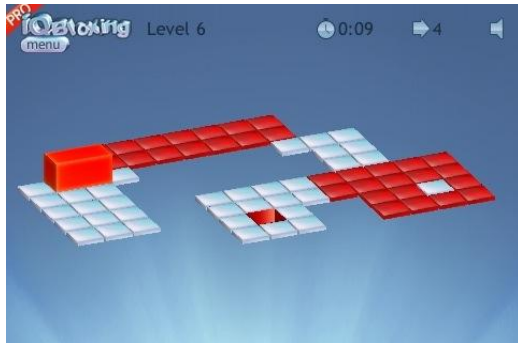

We have an experience and we’ll be glad to participate in developing *games, promotional and marketing apps, educational apps, healthcare apps, augmented reality apps*.

iPhone and iPad Portfolio

See all our iPhone, iPod Touch and iPad apps at <http://bees4honey.com/>

iQBloxing

iQBloxing is a 3D game for iPhone and iPod Touch. It's a mix of puzzle game and arcade game. iQBloxing is a very addictive game with more than 30 challenging levels.

Technologies used

OpenGL, Core Animation, SQLite, web services and social media integration, UI design

[iTunes link](#)

[Site link](#)

Jewelcart

Jewelcart is beautiful and **challenging puzzle game**. In this game you need to collect all gems in the mine. It's like a finding a way through labyrinth. Jewelcart has 27 awesome and difficult levels.

Technologies used

Core Animation, SQLite, web services and social media integration, UI design

iPadCalc

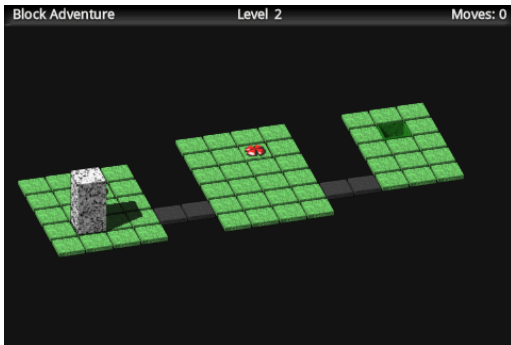

iPadCalc is a simple **calculator created for iPod**. It supports basic math functions and perfectly fits people who do not need a scientific calculator. iPadCalc has a simple and clean user interface which looks similar with Mac keyboard.

Android Portfolio

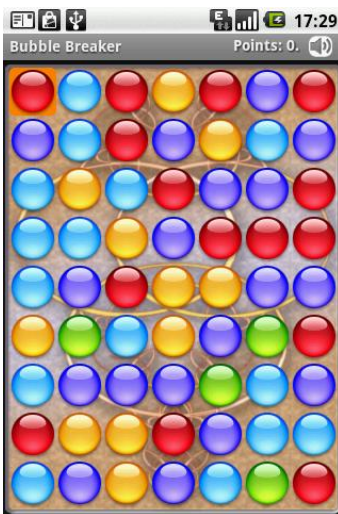

See our full Android portfolio at <http://androiddevstudio.com>

iQBloxing

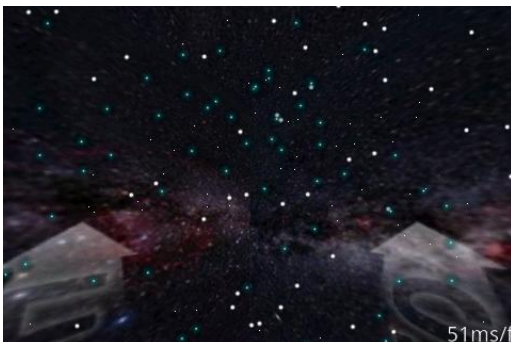

iQBloxing is a mix of puzzle and arcade game with more than 30 challenging levels. iQBloxing for Android is a **2D game with very realistic and nice animation**. iQBloxing has different control modes including accelerometer, on-screen buttons and traditional tap control.

Burst The Bubble

Burst The Bubble is a **puzzle game for Android**. Player should select groups of balls of one color to remove them from a game field. Goal of the game is to remove as many balls as possible. Burst The Bubble has nice and smooth animation effects.

Star Atlas

We've created **3D engine intended to show star map**. It's quite good in performance and can handle thousands of different stars. User can scroll and zoom the star map smoothly.

Why outsourcing to bees4honey?

On-Schedule & Budget

“We have been working with you guys for a year and a half already and all the projects I have asked you to implement were done by the time you said it would be done. I can always rely on your project estimates and be sure that it will be completed on time and within budget.” **Yohan K., Advance 3W Telecom Inc., USA**

Recommended by experts

“...I have no hesitation in recommending bees4honey for software development services. They are technically excellent, thoroughly honest, hard-working individuals with a good eye for architectural elegance blended with commercial realism.”
Stephen Briggs, Engineering Director, Vector Networks Ltd., UK

Identifying needs

“We were very impressed with the questions that were asked by you before the project was started. We think it gives your company a great advantage over other competitors as you “qualify” your clients’ needs so that you know exactly what they want before starting the project...” **Ed, DDP Media, Canada**

Professional Service

“I am looking at your work right now. I can see the quality of the work. So far it is very impressive. So is your service... The way you arrange the outsourcing process is very professional.” **Chris Zheng, Business Owner, Numeral Technology LLC., USA**

Post Payment

You pay for our services after you get a result. Before you pay for our services we present you an AdHoc version of your applications (for iPhone OS applications). **You do not pay before you see the results.** After you make a payment we give you the application source code together with your full rights to it.
